

SECTION 3.2

- Navigating qGIS and symbolising data

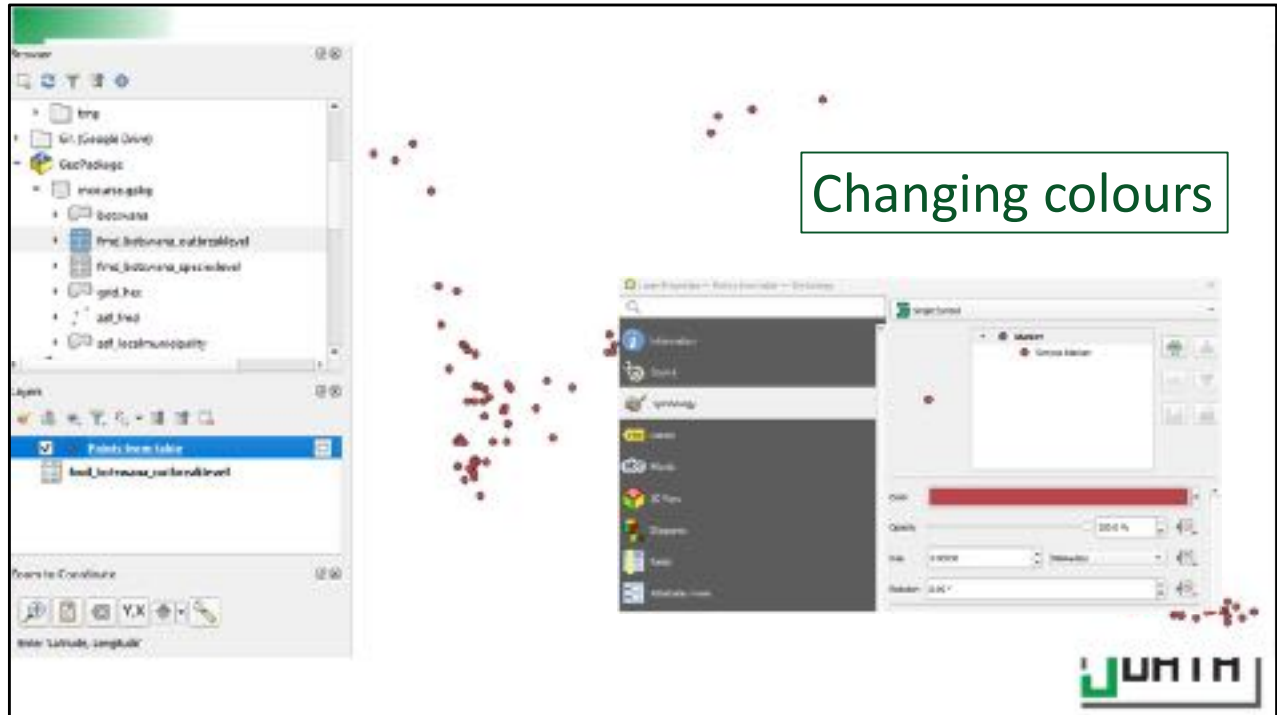

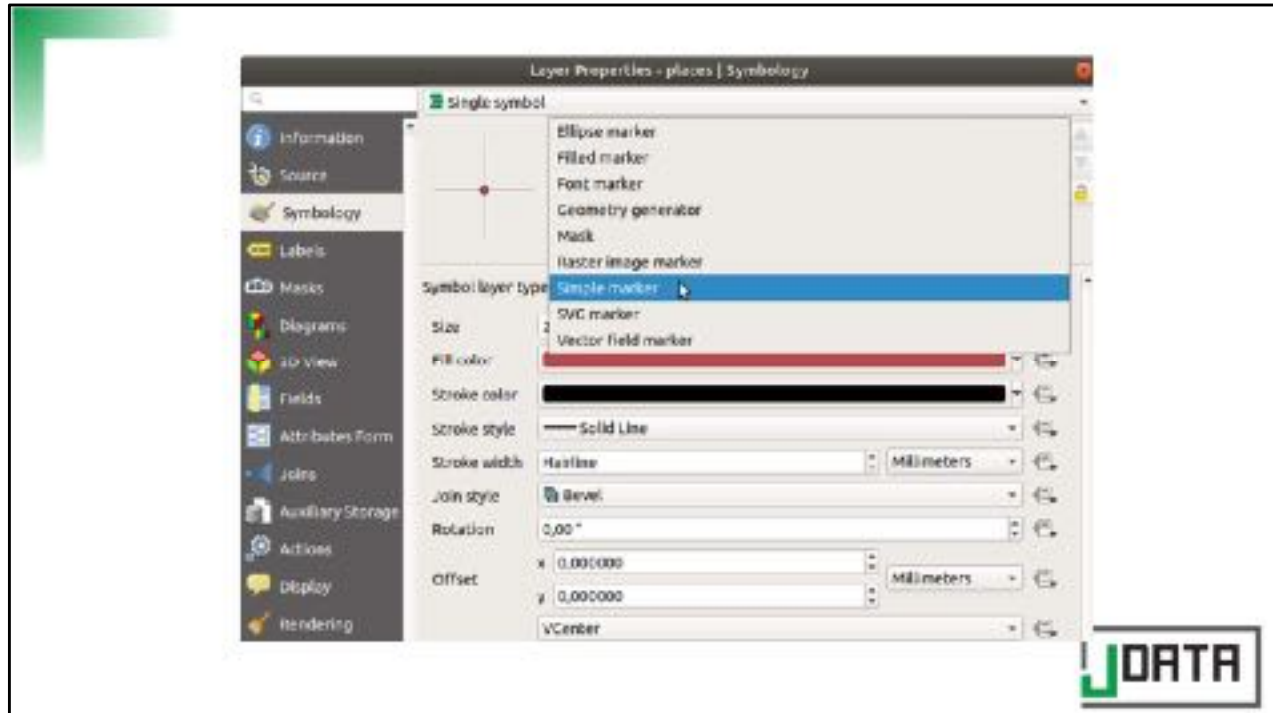

Symbology and Classification

- Changing colours
- Categorised
- Graduated
- TRICK: copying and pasting symbology

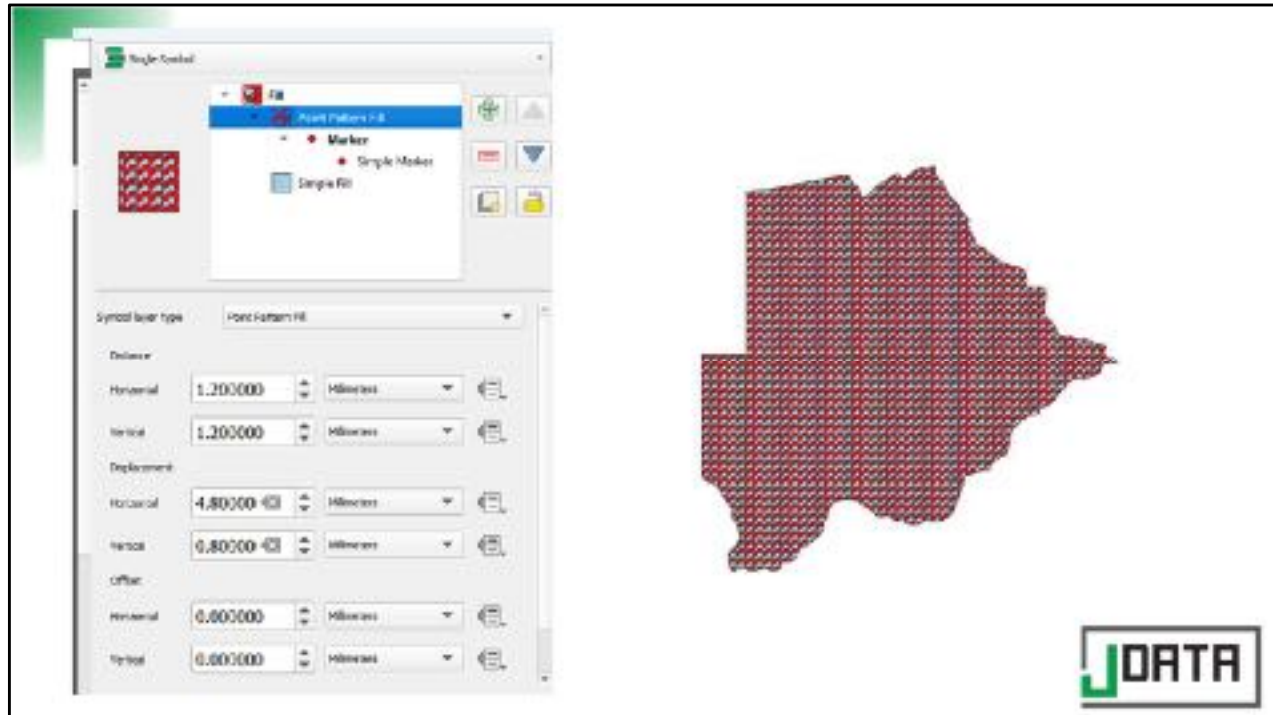

- Double click on the layer in the LAYERS window
- Select SYMBOLOGY
- Click on Simple Marker and change the colour for fill and/or stroke for the inside and outside colour of the marker
- Click on the Marker item to add another marker type
- Colour and formatting can be changed at the Marker or at the Marker type level (sometimes you'll use a combination of multiple markers)

- There are multiple symbol types for different scenarios, and the use of your own SVG or other icons may be used
- There are some specific line symbol types – arrow is commonly used to depict movement

- Polygon's can be differentiated from each other by both colour and fill – add multiple symbol layers to get the visualisation you need
